

Smart Analytics Tool - README

Project: Life Expectancy Data Analysis Dashboard

This project is a Streamlit-based Smart Analytics Tool that helps users analyze datasets interactively. The application allows users to upload CSV files, preview datasets, identify missing values, generate statistical summaries, and create dynamic visualizations.

Features

- CSV Upload Feature
- Dataset Preview
- Missing Value Analysis
- Statistical Summary
- Histogram Visualization
- Scatter Plot Visualization
- Line Chart Visualization
- Interactive Dashboard using Streamlit and Plotly

Technologies Used

- Python
- Pandas
- NumPy
- Plotly
- Streamlit
- Pyngrok
- Google Colab

Dataset

Life Expectancy Data Dataset containing health, economic, and demographic indicators used to study factors affecting life expectancy across countries.

How to Run

1. Install required libraries.
2. Create app.py with the Streamlit code.
3. Run Streamlit in Google Colab.
4. Generate a public URL using Pyngrok.
5. Upload the Life Expectancy CSV file.
6. Explore statistics and visualizations.

Project Outcome

The dashboard enables users to perform quick exploratory data analysis, identify patterns, understand missing data, and visualize trends in life expectancy.
